

Problem 1: Number Classifier

Name: _____

Function to write: `classifyNumber(num)`

Write a function `classifyNumber(num)` that returns a string describing the number:

- "zero" if it is 0
- "positive even" if it is positive and even
- "positive odd" if it is positive and odd
- "negative even" if it is negative and even
- "negative odd" if it is negative and odd

```
console.log(classifyNumber(7)); // "positive odd"
```

Test Cases — fill in the expected output before you run your code

#	Call	Expected Output
1	<code>classifyNumber(0)</code>	
2	<code>classifyNumber(4)</code>	
3	<code>classifyNumber(7)</code>	
4	<code>classifyNumber(-4)</code>	
5	<code>classifyNumber(-7)</code>	

STRETCH (optional)

Rewrite the even/odd check using the ternary operator instead of if / else.
