

Problem 2: Grade Calculator

Name: _____

Function to write: `getLetterGrade(score)`

Write a function `getLetterGrade(score)` that takes a number 0–100 and returns the letter grade:

- 90+ → "A"
- 80–89 → "B"
- 70–79 → "C"
- 60–69 → "D"
- below 60 → "F"

Then add a check at the top: if score is less than 0 or greater than 100, return "Invalid score" instead of calculating a grade.

Test Cases — fill in the expected output before you run your code

#	Call	Expected Output
1	<code>getLetterGrade(95)</code>	
2	<code>getLetterGrade(82)</code>	
3	<code>getLetterGrade(59)</code>	
4	<code>getLetterGrade(-5)</code>	
5	<code>getLetterGrade(150)</code>
