

Problem 4: FizzBuzz

Name: _____

Function to write: `fizzBuzz(num)`

Write a function `fizzBuzz(num)` that returns:

- "Fizz" if num is divisible by 3
- "Buzz" if num is divisible by 5
- "FizzBuzz" if num is divisible by both 3 and 5
- otherwise, return num converted to a string

Test Cases — fill in the expected output before you run your code

#	Call	Expected Output
1	<code>fizzBuzz(3)</code>	
2	<code>fizzBuzz(5)</code>	
3	<code>fizzBuzz(15)</code>	
4	<code>fizzBuzz(7)</code>	

HINT

Check the "divisible by both" case first — otherwise it will get caught by one of the other conditions before it's checked.
